## BEAUTY MIST

Your skin is the largest organ in your body. It is constantly exposed to chemicals and radiation – doing its job by providing protection for the rest of the body. But these exposures can cause the skin to age and become dry and brittle. Beauty Mist is a new breakthrough in skin care and protection. It helps to reduce the effects of ageing and helps to protect the skin from the harmful effects of solar radiation (it is not a sun block however).

The formula easily penetrates and increases the oxygenation and circulation of the tissues. This improves the metabolic function of the skin cells, helping to improve the construction of new cells while aiding the removal of old cells. This, in turn, results in a younger, healthier-looking skin.

The effects of Beauty Mist can be felt directly. The increased metabolic activity generates additional infrared heat (a natural byproduct of cellular activity) and can be felt as a pleasant warm feeling radiating from the skin.

Another benefit from Beauty Mist is its blood-detoxifying effect. This is due to the increased metabolic activity and additional oxygenation of the blood. This in turn will give the skin a healthier feeling and appearance.

Beauty Mist also contains a zinc boron combination. This acts as a disinfectant which helps to stop unhealthy germs in the body, but does not damage healthy human cells or cause allergic reactions. The remedy also contains natural aloe vera which is well known for its cleansing, soothing, and antibiotic properties, as well as rose water (an excellent skin conditioner, hydrator, and natural perfume) which gives the remedy a pleasant odour while providing additional vitamins and minerals for the skin.

Beauty Mist can help with the healing of the skin, particularly if the skin has become blistered or scarred due to excess sun exposure. Even bacterial infections of the skin can be healed more quickly with the use of Beauty Mist – it can even be used as a deodorant! Its benefits are endless!

***Typical Dose:*** *Spray often on affected areas or areas of intended sun exposure. The water-soluble delivery makes frequent use essential. Re-apply after swimming.*
